# DATABASE MANAGEMENT SYSTEM MINI PROJECT

## TITLE: COURIER MANAGEMENT SYSTEM

### USER REQUIREMENTS:

- The system is used for daily activities such as booking a courier, maintain employee details, process payroll of employees, maintain hub details, maintain company details etc.
- Courier management system consists of Employee, Branch manager and Customer.
- Employee is the head of the given courier management services and looks after the entire process of courier services.
- Employee has the access to create and look after the branch wherever it wants to extend its services for the customer's satisfaction.
- Employee employs branch manager to a given branch so that he looks after the packages.
- Employee views the courier details of the customer which consists of source, destination and consignment no.
- Employee can view its monthly wise income so as to get to know its income and the number of packages it has delivered.
- Branch manager is the sub head of its branch who looks after the customer's booking and hence updates and deletes the orders that have been placed by the customer.
- Branch manager manages and employs staff who collects and delivers the packages to the assigned receiver.
- Branch manager can also update its own details so has to update the admin who is an employee.
- Customer is the person who is going to book courier from its place to receiver's place.
- Customer has to login to the page in order to book courier.
- Customer when books a courier, the system auto generates a consignment no and amount it takes to place a courier and then customer has to fill the details which consists of sender's and receiver's address and provide phone number, mail-id, city, weight and many more.
- Customer can track its order where branch manager updates the status and can also provide reviews which will be sent to employee.
- Customer, Employee and Admin has its login-id and password as to login into the courier system.
- Courier system helps in transporting so as to decrease the load for manual transportation.
